

NICOLAS MIRANDA DELGADO

SOFTWARE ENGINEER

PERSONAL PROFILE

Software Engineer with 5+ years of experience designing, developing, and deploying RESTful APIs using Golang and Node.js. Specialized in AWS cloud architectures — including migrations to EKS, ECS, and Lambda — with strong proficiency in Docker, Kubernetes, CI/CD pipelines, and technical documentation via Swagger and OpenAPI.

Led critical infrastructure migrations and owned architectural decisions at a global SaaS company operating across 60+ countries. Experienced in synthetic monitoring with k6 and software quality validation. Proactive, results-driven, and committed to continuous improvement and technical excellence.

SKILLS

Golang
NodeJS
JavaScript
Java
Python
REST API / OpenAPI
SQL
Git
AWS (ECS, EKS, Lambda, EC2, Dynamo, SNS)
Docker
Kubernetes
CI/CD
k6
Swagger
Atlassian (Jira, Confluence)

LANGUAGES

English
Spanish — Native

EDUCATION

Computer Programming Analyst

Instituto Profesional Duoc UC
Graduated 2020 · Chile

WORK EXPERIENCE

SOVOS Compliance (E-Partners SPA)

Software Engineer III (Jan 2025 - Present)

- Migrated a legacy REST service from AWS EC2 to ECS, rewriting it in Golang with full end-to-end ownership — enabling direct integration with Chile's Registro Civil government API.
- Built biometric identity-verification flows for a Remote ID product — face-vs-NFC-chip, face-vs-database and face-vs-government-registry matching, document OCR/MRZ comparison, and deepfake/liveness detection — integrating third-party SDKs (Acuant) end-to-end.
- Delivered features and production support across CL, PE, MX and AR markets.
- Implemented synthetic monitoring with k6 on critical services, enabling proactive detection of performance degradations before they reach end users.
- Contributed to a service-wide automated-testing initiative and raised backend unit-test coverage toward an 85% target; authored regression suites for client-management endpoints.
- Introduced GitHub Copilot and Devin into the team's workflow, accelerating implementation, code review, and technical documentation cycles.
- Leading the company-wide infrastructure migration from ECS and Lambda to an EKS (Kubernetes) cluster, containerizing and re-deploying existing services.
- Own pre-release quality validation for the team's services, reviewing functional correctness of new features as part of the engineering delivery process.

Software Engineer II (Mar 2023 - Dec 2024)

- Developed and maintained internal and client-facing RESTful APIs in Golang, deployed to AWS ECS via Docker images and load balancers.
- Standardized API documentation with Swagger/OpenAPI across all team services, reducing integration friction for internal teams and clients.
- Led critical incident resolution across cross-functional teams, including support and fixes for Python services owned by other squads.
- Mentored junior developers through code reviews and best-practice guidelines, raising code quality and consistency across the team.
- Set up and maintained Veracode security scanning across service repositories and remediated dependency (NPM) vulnerabilities in the delivery pipeline.

Software Engineer I (Oct 2022 - Feb 2023)

- Migrated the ClaveUnica authentication service (Chile's national digital identity system, OpenID Connect / OAuth 2.0) from legacy stack to Node.js, preserving full functional logic and improving long-term maintainability.

TOC BIOMETRICS S.A.

Junior Backend Developer (Aug 2021 - Oct 2022)

- Developed and maintained internal and client-facing REST APIs in Node.js, deployed via automated CI/CD pipelines to AWS Lambda.
- Migrated legacy PHP services to Node.js, improving maintainability, performance, and alignment with the company's modern stack.
- Maintained legacy Java and PHP services, ensuring operational continuity in production environments. • Created and maintained technical documentation in Confluence for internal teams and external clients.

Junior Support Engineer (May 2021 - Jul 2021)

- Managed the operational lifecycle of production services — activations, deactivations, and cross-team escalations — ensuring continuous service delivery to clients.
- Monitored service performance and investigated transaction failures, identifying root causes and driving reliability improvements in production systems.

Trainee Developer (Nov 2020 - Apr 2021)

- Built a front-end showcase demo in HTML/CSS/JavaScript integrating the company's biometric solutions for commercial presentations.
- Executed functional test plans as a QA analyst, validating new features prior to production release.

TREBOL-IT S.A.

Junior Analyst (Jun 2020 - Oct 2020)

- Implemented TDD as the unit testing standard across the company, promoting quality-first development practices from the earliest stages.
- Authored practical TDD adoption guides tailored to each team's technology stack, enabling organization-wide rollout.

Trainee Developer (Mar 2020 - Jun 2020)

- Migrated a service from Oracle Tuxedo to a microservices architecture using JavaScript/TypeScript, GraphQL, and TypeORM, deployed via Jenkins CI/CD.
- Rewrote legacy C system functions in JavaScript/TypeScript, ensuring full functional compatibility in the new environment.
- Created internal learning capsules and technical documentation to standardize development practices across the team.
